

Cybersecurity Fundamentals for Beginners & Small Business Owners

A practical, defensive cybersecurity course for complete beginners and small business owners; passwords and multi-factor authentication, spotting phishing, securing devices and home/office networks, safe browsing and backups, and building basic incident response habits. Every lesson walks through real, live tools, includes an illustrative diagram, and links to a real video for further explanation. This course teaches protection, not attack; there is no hacking, exploitation, or offensive technique content anywhere in it.
